From: roelof@...
Topic: 11034 Message: 11037

Hello Dirk,

I have never noticed this PERSEUS RTTY feature before!

David, I do switch off my monitor, however it is the last thing I do. No problems encountered so far!

73,
Roelof

Hi all,

Mainly nothing unusual. But then it seems as if have received my
first T/A this season with Sydney at 02:39.

Ary
Your tentative at 2157 is Arkhangelsk, I think. Your raw log shows this.
Your UNID at 2350 is Valencia, Spain.
Your UNID at 23259 AA94. My wild speculation: Novorossiysk??

Hello Vincent,

I received NMR as well.

I checked propagation from Puorto Rico, looking for NDB DDP on
392.032 kHz. Amazingly it peaked between 03:20 and 03:30 UTC!
This is just the time we received it on NAVTEX!

73,
Roelof

11050. Swimming pool QRM...

Yahoo group: navtexdx (2015)
Date: 2015-10-04 18:30:29 UTC
From: Dirk Claessens
Topic: 11050 Message: 11050
Attachments: 2 described; binary payloads are missing from this source WARC

Hi all,

For the last month or so, I noticed that - at times - my noise floor was
~8..10 dB higher then my usual figure of -120dBm, -125dBm on a good day.
(with Perseus RBW setting of 30.5 Hz)

Several wide bands of noise could be observed in the range of ~400..800KHz.
The noise could be present for several days/nights in a row, then cease
for a few days, then start again.
A few excursions with the Sony SW7600 in both our backyard and that of
the neighbours all resulted in very sharp null bearings, all
unequivocally pointing to.... the swimming pool of the neighbours behind
our backyard???
(probably a pump, or a filter is the culprit)

A practical problem was that the owners are absent for long periods,
probably working abroad or so.
Only a housekeeper pops up shortly every few weeks at unpredictable times.

8..10 dB is obviously more than sufficient to completely miss DX,
something needed to be done.
So today I cobbled together a temporary test setup with some ropes and
pulleys.
The idea was to apply the law of quadratic attenuation, by moving the
whip both away from the QRM source and higher up. (and hoping that the
QRM generated in the /own/ house would not mess up things...)

And it worked...noise floor is back at -120..-125dBm, and the noise
bands are gone!
Raw sketch below.

Regards - Dirk

Red line was noise floor before relocation of whip

Hello Dirk,

Yes, moving a mini-whip around a bit can make a lot of difference
for sure!

73,
Roelof

Hello Dirk,

Pleased to see that you managed to achieve a solution to your QRM. And you solution shows that it isn't always the best solution to get a long way away from your own house. 'Sweet Spots' are not always in the obvious place and it pays to experiment.

Does your loop have any effect on nulling the interference? If your neighbour is the cooperative kind, I have had a lot of success with in-line mains filters. With luck, he will let you fit one to his swimming pool supply. Then you can go back to your mast.
Do keep us updated. Practical solutions to interference are always of interest to listeners.

Kind Regards
David gm8xbz

Subject: [navtexdx] Swimming pool QRM... [2 Attachments]

Hi all,

For the last month or so, I noticed that - at times - my noise floor was ~8..10 dB higher then my usual figure of -120dBm, -125dBm on a good day. (with Perseus RBW setting of 30.5 Hz)

Several wide bands of noise could be observed in the range of ~400..800KHz. The noise could be present for several days/nights in a row, then cease for a few days, then start again.
A few excursions with the Sony SW7600 in both our backyard and that of the neighbours all resulted in very sharp null bearings, all unequivocally pointing to.... the swimming pool of the neighbours behind our backyard???
(probably a pump, or a filter is the culprit)

11055. NAVTEX from Zealand, HOL

From: dl4ybp@...
Topic: 11058 Message: 11058

Hi all,

First congrats Dirk for successfully fighting the noise.

Last night's propagation conditions are an invitation fo me to comparing the ALA and the mini whip.
Both setups are not identical however. The ALA is connected to the Perseus. The mini whip feeds the Rohde & Schwarz EK071 receiver. This an analogue professional receiver that was used by German government agencies in the 1980/90s and cost a lot of tax payers' money.
Their performance on 518kHz is very similar. Therefore I think I can say that the differences come from both antennas.
As I searched the raw logs for differences I used TrueTTY.

It is as Dirk said some time ago. If you want them all you need both antennas.
For myself I think what a beautifully small and competitive antenna the mini whip is at these low frequencies. And if I go down to longwave and even further down the mini whip is the leader.

Have some fun.

73
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95

Receiver : Rohde & Schwarz & EK 071
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95

Alger on the mini whip. Nothing on the ALA

11059. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-05 10:55:43 UTC
From: david
Topic: 9398 Message: 11059

Hello All,

Just ordinary loggings. Several local gale warnings stamped on what looked like to be more interesting DX. Perhaps the DX areas will get the gales next time, while my local stations are quiet.

Logs over 1000km

11060. Navtex log from Antwerp,BEL 20151005

Yahoo group: navtexdx (2015)
Date: 2015-10-05 13:13:12 UTC
From: Dirk Claessens
Topic: 11060 Message: 11060

Hi all,

It seems I'm back in business.
No T/A yet, but given the conditions...
Cyprus was a long time ago.

Regards - Dirk

Hi David,

I can minimize (although not completely remove) the QRM with the loop,
but then the loop is pointing straight north,
with the nulls heading for Canada, not an option...

Regards - Dirk

Hi Ary,

I have been playing around with various HF MSI frequencies this past week
and noticed this morning excellent receipt of signals from UAT on 12 MHz
with a transmission that began at 0700 and continued to 0800.

Hi Robert,

Long time no see ;-)

The one on 8416.5 was also very loud. I copied Shanghai on 4209.5 tonight with a great signa lso the reception from thee ast seems to be good..

BTW someone is having problems on 4209.5. I guess Irakleio. It is idling since its last transmission at ca 1900

Ary

11066. Navtex log from Antwerp,BEL 20151006

Yahoo group: navtexdx (2015)
Date: 2015-10-06 12:27:17 UTC
From: Dirk Claessens
Topic: 11066 Message: 11066

Hi all,

The new position of the whip is a success.
Whip via splitter connected to Perseus (518) and Lowe HF225 (490).
Canadian T/A on both frequencies, despite unstable sun and high Kp.
I'm relieved...

Roelof: I have seen Yand outputting long strings of identical characters, but nothing like what you posted!
With me it sometimes happens when Pinneberg ceases transmission, and outputs a long series of carriage-return characters.
(I guess they do this to accomodate for Navtex receivers with printed output?)

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. Wideband loop
Navtex-Decoder : YaND 6.4

Hello Dirk,

Glad to see your antenna works once more as it should. I have two mini-whip installed at the same height and about two metres apart. Yet, one has a lower noise floor and less overall susceptibility to local noise!

On an other note, for NDB hunting I am now using Linrad overnight recordings with my PERSEUS. It is an incredible weak signal tool and also makes it possible to speed up the waterfall considerable at play back by switching of the detector and audio output.
The picture below shows last night's reception of NDB QY-263, Sydney, CAN NL.

As you can see, reception of VCO on 490 kHz coincides with the time propagation starts to peak.

This way it is easy to study propagation. The amazing thing is that no night is the same at the moment. I also do this for DDP-391, San Juan, Puerto Rico, which is very poor at the moment.

So it is no wonder that we don't see much of NMR!

Regarding propagation, the sun is very restless. However, solar flux has dropped from 129 last week to 83 now and that makes a difference!

73,
Roelof

11068. Navtex Logs from W Scotland

From: david
Topic: 9398 Message: 11068

Hello All,

Like others, I noticed a peak in reception just in time for a series of clear messages from $04J Sydney. In the wrong time-slot, as usual, but I wasn't complaining.
YaND did particularly well on 490kHz. I had a strong carrier sitting in the centre of the decoder passband for most of the night, but the decodes still came out. Impressive.

Logs over 1000km

11069. Collision El Oraiq/Flinterstar Ostend MRCC

Yahoo group: navtexdx (2015)
Date: 2015-10-06 15:16:40 UTC
From: Dirk Claessens
Topic: 11069 Message: 11069

Hi all,

A collision ocurred last night, 8 miles off the Belgian coast, MV Flinterstar sank.
All seamen could fortunately be picked up and are unharmed.

2015-10-06 03:19:21 91> ZCZC TD00

2015-10-06 03:20:02 90> NNNN

The link below is to a Belgian news site (and in Dutch), but if you scroll down there is a MarineTraffic/AIS recording where you can see the collision occur. Incomprehensible in this day and age of radar/GPS/etc...

http://deredactie.be/cm/vrtnieuws/regio/westvlaanderen/1.2461921

Regards - Dirk

Hi David,

I'm blessed with the same carrier here on 490.
This is very likely the Bulgarian beacon WAK , according to REU.
I'm guessing it fades away in the early morning.

Regards - Dirk

Hi Roelof,

Thanks for the info on Linrad, I will have a look at it again.
The last time I used it was several years ago, and I didn't like the
then rather complex setup.

Yes, solar flux has dropped under 50 now, and it's showing in the logs!

Regards - Dirk

From: dl4ybp@...
Topic: 7241 Message: 11074

Hi all,

Apart from Bodo and Odessa nothing intersting to report on 518 kHz.

73
Hans, DL4YBP

Receiver : Rohde & Schwarz & EK 071
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95

11075. Navtex log from Antwerp,BEL 20151007

Yahoo group: navtexdx (2015)
Date: 2015-10-07 13:45:44 UTC
From: Dirk Claessens
Topic: 11075 Message: 11075
Attachments: 1 described; binary payloads are missing from this source WARC

Hello all,

Good propagation from the east, T/A has taken a step back,.
Sydney was very weak; only short fragments NOTSHIP SYDNEY, BANQUERAU BANKS, HALIFAX HARBOUR could be decoded.

I'm surprised even this came through, given the situation on the sun: :-\

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. Wideband loop
Navtex-Decoder : YaND 6.4

From: Maurizio
Topic: 5417 Message: 11076

Hello all,

yesterday night my perseus has stopped; I suspect a
problem with the original power supply, because I can measure only 2.5 v
output. I'm trying to replace the original power supply.
Last night I
used the afedri sdr with the ALA 1530 and despite the static I received
again weak signals from Sydney CAN:

11079. Unidentified station

Yahoo group: navtexdx (2015)
Date: 2015-10-08 09:50:27 UTC
From: david
Topic: 11079 Message: 11079

Hello everyone,

I have seen the following message a couple of times on 490kHz, but can't identify it. It is squeezed between other signals or, more usually, interference. The ID is right for the time-slot; H fits with 0110z. But I was not expecting to find any transmissions there. Is the repeating 'FSD' significant?

Topic: 9398 Message: 11080

Hello All,

I was going to say that conditions seemed to be dropping off again but, looking at the final log, things don't seem to be so bad. That is just how subjective reception can be. All the same, the Northern stations appear to have been lost, this time.

Logs over 1000km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

Hello all,

Dirk, the path to Sydney, CAN, was not much effected yesterday night. However, last night the picture was different.

QY-263, Sydney, CAN, NL, 4538 km, October 6-7, 2015:

QY-263, Sydney, CAN, NL, 4538 km, October 7-8, 2015:

The screen scolls from the top down, hence the reverse time scale at the left.

NAVTEX 490 kHz log over 1000 km mini-whip:

11082. Re: [navtexdx] Unidentified station

Yahoo group: navtexdx (2015)
Date: 2015-10-08 13:40:28 UTC
From: Dirk Claessens
Topic: 11079 Message: 11082

Hi David,

This is what I received:

2015-10-08 01:10:15 10> ZCZC HA16
2015-10-08 01:10:27 12> 012100 UTC OCT 7 FDSFSDFSD FSDFSDAGSDAGASDCANEL
THIS MSG LASTTIMENNNN

My first thought was that Yand must have gone in bad sync (this is rare,
but can happen), but my message is exactly identical to yours,
so it looks like this is genuine but hastily typed test message??
The 01:10 time slot is correct for a H-message, and this slot is
currently free on 490KHz.

I'll see what I can find on the IHO navtex message board about
new/planned stations.

Regards - Dirk

Hi all,

A few goodies from what I received last night.

73
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)

Hi David,

Nothing found on the IHO website about planned "H" stations.

But I found the navtex panel report of their latest meeting in Monaco.
Interesting read:
http://www.iho.int/mtg_docs/com_wg/CPRNW/WWNWS7/WWNWS7-3-3-1a-NAVTEX%20Panel%20Report.pdf

Note the remark about the Italian stations using too much power at night
and interfering with Baltic stations...

General link to all documents:
http://www.iho.int/mtg_docs/com_wg/CPRNW/WWNWS7/WWNWS7.htm

In the Self-Assesment NAVAREA III document I found:

Poti [G], State of Georgia, 490 KHZ, Georgian, Planned.
The NAVTEX Station at Kerch, Ukraine, moved to Berdiansk in the Sea of
Azov. NI of the
new Position of antenna neither the Range.

My latest log of 3G Kerch on 518 dates back to 2009, it was hard to
catch at the time.
On REU, only reports from Poland and Cyprus are seen for the last years.

Something to watch

Regards - Dirk

11086. Navtex log from Antwerp,BEL 20151008

Yahoo group: navtexdx (2015)

From: Dirk Claessens
Topic: 11086 Message: 11086

Hi all,

On 518, most northern station logged was Orlandet, no sign of Grindavik,
and Torshavn was only logged in the morning.
On 490, Grindavik could be logged though.

Regards - Dirk

Hi Dirk,

Thank you for the links. Fascinating reading, and worth a regular visit.

Regards

David, gm8xbz

Hello all,

the perseus is back on line , still static and something went wrong on
the 490 , because the frequency was incorrect:

```

Hi all,

Clearly visible on G. Earth.
Circular radials can be seen also on the detail inset.
Exact coordinates: 33.094198° -16.338814° (copy/paste into GE)

Picture also available on:
<https://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Guides/Navtex%20Antenna%20Locations/>

From: david
Topic: 9398 Message: 11094

Hello All,

A slight improvement in Northern stations, but still no sign of Bodo or Vardo. There was also a lot of corruption of the decodes, so all is still not well.

I got the same clear header in time-slot H on 490kHz, again. I realise that noise and co-channel signals can cause false decodes, but this line popped out right in the same place as before. As you can see, there was no supplementary keying, this time.

Dirk,

Nice catch.
I shall have to 1) Keep a close watch; 2) Update my StationList.

Nice to see new stations coming on line, when there seem to be so many closures.

Regards
David

11098. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-10 09:44:09 UTC
From: david
Topic: 9398 Message: 11098

Hello All,

490kHz reception was, again, disrupted by two strong carriers right in the middle of the passband.
On 518kHz, Bodo made only one appearance in the early evening. [Even Torshavn at under 700km was hard to decode.]

Logs over 1000km

Session Report for David Atkins, GM8XBZ

Hello Dirk,

Congratulations with a new one!

Do you have details of location, call sign etc, so I can enter it as
a new station in REU?

73,
Roelof

Hi Roelof,

Here's what I could dig up:

490KHz $03G Poti, GEO (Georgia)
lat 42.127481 lon 41.669579
ITU grid map locator: LN02UC

BCST@ 0100,0500,0900,1300,1700,2100

Regards - Dirk

Hello all,

It looks like the worst of the geomagnetic storm is over now.
However, there was quite a bit of static from a thunderstorm over
the Balkan.

NAVTEX 490 kHz log over 1000 km mini-whip:

```
20151010 1814 490 $03N IGS Piombino,ITA 1087

From: roelof@...
Topic: 11079 Message: 11108

Hello Dirk,

Thank you for the information.
I have entered it in RWW.

A search on the Internet revealed this site:

http://www.arlomaritime.com/projects/

It appears that Poti uses a 1 KW transmitter and a whip antenna.

There is also information on a new NAVTEX station on the Seychelles.
Now, that is DX for sure!

73,
Roelof

Hi Roelof,

Thanks for the link. The construction photos are interesting, as they seem to have built a fan of radials to 'encourage' propagation towards the shore. There doesn't seem to be an up-to-date photo, and the satellite image is too coarse to show anything (even though it was taken in 2015). An old photo dated 2004 shows at least one tower with what looks like a MF top hat. The lighthouse ought to show up on the satellite image. It is cast iron, was built in 1862 in London, and shipped to Georgia for erection. I wonder what RF facilities have been based there in the past.

Best Wishes,
David gm8xbz

Hello All,

Another mixed night, with a lot of garbled messages due to receiving two signals at once. However, you can see how the ionosphere changes as the sun moves round when different stations become the most distinct in their time slot during different hours of the day.

The mystery 'H' transmission appeared, again. It only seems to occur in the 0110 slot. No sign of it at 2110 or 0510. The message has the same letters every time. On my keyboard, the letters all appear in the middle row of the left hand keys. Is this the same on all National Keyboards? Is it the operator rattling keys at random, or are they significant? Why should the message be valid until 0217 on the 15th October 2015?

11111. Re: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-11 14:06:16 UTC
From: Dirk Claessens
Topic: 9398 Message: 11111

Hi David & all

I guess the mystery message is indeed the result of the operator
rattling a QWERTY keyboard.
Since the character sequence is exactly identical each time, the message
is probably stored on file.
Has anyone seen the fragment below on 490, 10 minutes earlier?
I'm pretty sure this is Poti again, being kicked out by Penalva at 01:00:32
The B2-character Z is normally used for "no message on hand" and test
messages.

Regards - Dirk

11115. Miniwhip: Height vs. signal over noise

Yahoo group: navtexdx (2015)
Date: 2015-10-11 18:44:13 UTC
From: Dirk Claessens
Topic: 11115 Message: 11115
Attachments: 3 described; binary payloads are missing from this source WARC

Hi all,

You may recall that to get rid of a source of QRM, my whip is now hanging from a rope-and-pulley system, about 5 .5 mtr from the house, at a height of 7 meter agl.
As the height of the whip can easily be changed, this is an ideal situation to test the behaviour of the whip wrt noise levels, optimal height etc..
I had done this test before some 4 years ago, but not very precise. Time to do it again, and documenting it.
What I also wanted to check, is if there were any noise sources of the own house possibly reaching the whip.
(how far does the "noise bubble" go in function of the height?)

The Perseus was tuned to 549 KHz Deutschlandfunk Nordkirchen, the station closest to 518.
2 markers were set, one to the signal, and a reference marker in a quiet spot nearby on 543 KHz, to get a reading for the noise floor.
The whip was then lowered in "1 meter each minute" steps, readings were taken and written to the marker file.

First the absolute values were plotted.
Note that: blue = noise floor, red = signal, and that the left and right axis scales have identical spans of 19dB, but are shifted, in order to get a compact graph.
We see that for a delta height of 6 meters:
-the noise floor goes up ~8dB, or 8/6 = 1.3 dB/m, almost linearly.
-the signal goes up ~14 dB, or 14/6 = 2.3 dB/m, clearly curved and showing a maximum at ~5..7 m.
The continuous lines are polynomic (2nd degree) regression lines.
The noise on the measurement values seems to increase with decreasing height. Was this caused by my body standing under the whip, and near to the whip for the lowest measurements??

What really matters of course, is the signal over noise value, this is plotted below:

-Within a narrow 1 dB band, the curve shows a clear optimum in the region of 4..7 m agl, a familiar value often given as optimal by Roelof.
-The measurement was performed during the day and thus with ground wave propagation. As the whip is truly omnidirectional, I cannot see a reason why the behaviour would be different at low angle DX signals.
- At 5.5 meter from the house, the whip seems to be outside of the "noise bubble"

Regards - Dirk

Hello Dirk,

Thank you for this most interesting report.
It agrees with my findings that a height of about 5 meter is excellent.

Your finding that raising the antenna higher than 6 meter does decrease the signal to noise ratio is interesting.

I have a 12 meter fibre glass mast, so I am tempted to do some research as well.

And yes, the electric noise cloud diminishes very quickly moving away from the house.

73,
Roelof

11118. Re: [navtexdx] Miniwhip: Height vs. signal over noise

Yahoo group: navtexdx (2015)
Date: 2015-10-11 22:08:47 UTC
From: Robert W Strohmeyer
Topic: 11115 Message: 11118

Could it be that there is an interaction between the Mini Whip and the ground that it is mounted over? So when you raise the antenna above a certain height the interaction decreases possibly raising the noise floor.

11121. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-10-12 08:40:52 UTC
From: roelof@...
Topic: 70 Message: 11121

Hello all,

A very short log today, as I inadvertently changed the cabling of my 2-port splitter between mini-whip and PERSEUS. This had nil effect for the PERSEUS, but gave 27 dB attenuation for the port feeding my Afedri SDR, which is used for NAVTEX reception on 490 / 518 kHz....

NAVTEX 490 kHz log over 1000 km mini-whip:

```
20151011 1727 490 $03I ICH La Maddalena,ITA 1228
20151011 1803 490 $03N IGS Piombino,ITA 1087
20151011 1831 490 $03P SVK Kerkyra,GRC 1821
20151011 1941 490 $02W EAR Coruna,ESP 1283
20151011 2040 490 $03E IQM Mondolfo,ITA 1114
20151011 2143 490 $01K TFA Grindavik,ISL 2045
```

NAVTEX 518 kHz log over 1000 km mini-whip:

```
20151011 1742 518 $01N LFO Orlandet,NOR 1367
20151011 1745 518 $03K SVK Kerkyra,GRC 1821
20151011 1850 518 $03R ICH La Maddalena,SA,ITA 1228

From: Maurizio
Topic: 5417 Message: 11123

Hello all,

conditions improved, but no T/A;
interesting sequence of
SUZ Ismailia EGY, EAL Las Palmas CNR, LGP Bodo NOR and CTA Penalva POR
(very rare here) on mini-whip.

11124. Re: [navtexdx] Miniwhip: Height vs. signal over noise

Yahoo group: navtexdx (2015)
Date: 2015-10-12 09:25:27 UTC
From: Dirk Claessens
Topic: 11115 Message: 11124

Hello Robert,

My guess is that the coax length is playing a role here, as more noise will be picked up by the shield for longer lengths..
My coax shield is connected to grounding rods at ground level, this is ~10 m coax with the whip at 7m agl.
Grounding the shield resulted in a considerably lower noise floor at my QTH, as I found out 5 years ago.
To really investigate the effect of coax length, a wireless whip would be ideal. :0)

Hello Carlo,

your decode is SAN JUAN !

Good catch !

73,
Maurizio

11126. Navtex log from Antwerp,BEL 20151012

Yahoo group: navtexdx (2015)
Date: 2015-10-12 10:06:45 UTC
From: Dirk Claessens
Topic: 11126 Message: 11126

Hello all,
Generally improving conditions, although no T/A.
And it seems I'm in a sweet spot for receiving the new station Poti?

Both 490/518 on the whip via splitter, 518=Perseus, 490=Lowe HF225.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. Wideband
loop
Navtex-Decoder : YaND 6.4

Hello Dirk and all,

your guess is very interesting;

now my
mini-whip is 3 meters over the roof and about 12 meters from earth; my
coax cable is about 25 meters through the walls of the house.

I would
like to test a mini-whip in the garden at about 5m from earth with few
coax cables meters with grounding rods;

it would be very interesting to
see if it improves the signal/noise.

Maurizio

From: david
Topic: 9398 Message: 11128

Hello All,

A night of considerably improved reception, especially to the East. $09X Ismailia is a new one for me. There were six clear messages. Helpfully, the headers were all complete, AND included the information that they were from Navarea IX. If only all stations were as helpful.

Cyprus Turk Radio appeared again, after a long absence from my log. {Using the 'E' identity on 518kHz}

Like Joachim, I found the UNID 'H' station at 2110 as well as at 0110. Now that I knew what pattern I was looking for, I was able to find it on previous nights at both times. Investigations will continue.

Still no T/A

Hi Maurizio,

That could be worth the effort.
I have just checked the noise floor again at 518 (with no signal present)

Perseus set to 125 kS/s, Span/RBW 25/30.5
Shield grounded: -125 dBm
Not grounded: -110 dBm

That's a whopping 15 dB difference!
I have also buried the coax ~20cm deep from the grounding point to where
it enters the house.

Regards - Dirk

Date: 2015-10-12 14:54:18 UTC
From: Frans.Vink@...
Topic: 11115 Message: 11130

Maurizio,

Initially I had my miniwhip on my roof as well, some three meters free of the roof, at least 10 meters away from any other object. I then moved it into my garden on a 6m pole ten meters away from my house and at the edge of a forest. In this set-up the performance is really a lot better. Noise levels substantially lower.

Reading all the messages from Roelof and Dirk i am going to play a bit with the height, you never know.

Hope this helps,

Frans

Hello Dirk,

I am investigating the noise floor of the LZ1AQ loop amplifier.
My first findings are interesting and looking at your nice mini-whip graphs, it seems an excellent way to present the results of my measurements.

It may seems weird, but I have never used a program to convert data from a table into a graph. Could you guide me to an easy program to start with?

Thank you in advance.

73,
Roelof

Interesting experiment Dirk ! I have my Mini Whip somewhat 15 meters up in a pine tree, maybe more and the performance is not good. It pick up a lot of QRM from pumps about 200 meters away. Spectrum control authority says it's within the limits. I was already planning to search for a better spot to put it up but just lowering it is also worth to give it a try.

73,

Guido.

Onderwerp: [navtexdx] Miniwhip: Height vs. signal over noise [3 Attachments]

Hi all,

You may recall that to get rid of a source of QRM, my whip is now hanging from a rope-and-pulley system, about 5 .5 mtr from the house, at a height of 7 meter agl.
As the height of the whip can easily be changed, this is an ideal situation to test the behaviour of the whip wrt noise levels, optimal height etc..
I had done this test before some 4 years ago, but not very precise. Time to do it again, and documenting it.
What I also wanted to check, is if there were any noise sources of the own house possibly reaching the whip.
(how far does the "noise bubble" go in function of the height?)

The Perseus was tuned to 549 KHz Deutschlandfunk Nordkirchen, the station closest to 518.
2 markers were set, one to the signal, and a reference marker in a quiet spot nearby on 543 KHz, to get a reading for the noise floor.
The whip was then lowered in "1 meter each minute" steps, readings were taken and written to the marker file.

First the absolute values were plotted.
Note that: blue = noise floor, red = signal, and that the left and right axis scales have identical spans of 19dB, but are shifted, in order to get a compact graph.
We see that for a delta height of 6 meters:
-the noise floor goes up ~8dB, or 8/6 = 1.3 dB/m, almost linearly.
-the signal goes up ~14 dB, or 14/6 = 2.3 dB/m, clearly curved and showing a maximum at ~5..7 m.
The continuous lines are polynomic (2nd degree) regression lines.
The noise on the measurement values seems to increase with decreasing

height. Was this caused by my body standing under the whip, and near to the whip for the lowest measurements??

What really matters of course, is the signal over noise value, this is plotted below:

-Within a narrow 1 dB band, the curve shows a clear optimum in the region of 4..7 m agl, a familiar value often given as optimal by Roelof.
-The measurement was performed during the day and thus with ground wave propagation. As the whip is truly omnidirectional, I cannot see a reason why the behaviour would be different at low angle DX signals.
- At 5.5 meter from the house, the whip seems to be outside of the "noise bubble"

Regards - Dirk

11133. Re: [navtexdx] Miniwhip: Height vs. signal over noise

From: Dirk Claessens
Topic: 11115 Message: 11133

Hello Roelof,

I use the spreadsheet component sCalc of LibreOffice, a freeware MS Office-like program suite.
Installer download link: LibreOffice <https://www.libreoffice.org/download/libreoffice-fresh/>

(MS Excel will do the job as well of course)

Import from the Perseus marker file is easy: select the data part with the mouse, do ctrl-C for a copy,
From Calc/Excel: edit -> paste -> OK
You can now delete the not needed colums(frequencies)
Colums of interest can now be selected and graphed/tailored/etc..

If you need more help, mail me.

Regards - Dirk

11135. Re: [navtexdx] Miniwhip: Height vs. signal over noise

Yahoo group: navtexdx (2015)
Date: 2015-10-12 18:55:52 UTC
From: roelof@...
Topic: 11115 Message: 11135

Hello Dirk,

Thanks!
I have LibreOffice installed and use Base for my NDB database.

If I get stuck, I will ask for help.

73,
Roelof

11136. NAVTEX from Zealand, HOL

Hi all,

I have listed two remarkable loggings from last night.

73
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95

Unid on 490 kHz last night. (13 Oct 2015)
Possibly Monsanto

11140. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-13 13:11:09 UTC
From: david
Topic: 9398 Message: 11140

Hello All,

Nice to see Bodo back throughout the session.

Still no T/A

Logs over 1000km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Oct 13, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances
Report Sorted by Frequency and Time

11141. Navtex log from Antwerp,BEL 20151013

Yahoo group: navtexdx (2015)
Date: 2015-10-13 13:59:33 UTC
From: Dirk Claessens
Topic: 11141 Message: 11141

Hi all,

Another geomagnetic storm in progress, it shows in the log

Regards - Dirk

11142. UNID H

Yahoo group: navtexdx (2015)
Date: 2015-10-13 15:18:54 UTC
From: roelof@...
Topic: 11142 Message: 11142

Hello all,

As more listeners have now reported UNID $00H on 490 kHz, I have added it to the NAVTEX station list.
Starting of today, I will enter reports of this UNID in RWW.

If you like previous reports entered as well, please email these direct to:

roelof@...

If you are using YaND they are easy to find.
Go to <Log> and select left from the filter button under NAVAREA <UNID> and under ID-LETTER the letter <H>.
Click on the Filter On button and all previous decodes will be displayed.

73,
Roelof
NAVTEX Editor

11143. Navtex logs from Whitley Bay ENG

Yahoo group: navtexdx (2015)

11147. A Receiving Conundrum

Yahoo group: navtexdx (2015)
Date: 2015-10-14 09:30:37 UTC
From: david
Topic: 11147 Message: 11147

Hello All,

There is an English idiom, "Its' all Greek to me", suggesting that you simply don't understand it. This is what I found:

On 490kHz between 0241 - 0246 on 2015-10-14, I received 7 messages that were clearly from 'STATHMOS IRAKEIO' [because each message said so). Yet each message used the 'S' as its B1 character -- SA82, SA73, SA68, SA50, SA32, SA15, SA84.

Can anyone help me out with the use of 'S' instead of 'Q' ?

Best Wishes
David GM8XBZ

11148. Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-10-14 09:32:20 UTC
From: Maurizio
Topic: 5417 Message: 11148

Hello all,

good decodes from SUK Quseir EGY, SUZ Ismailia EGY, UDN
Novorossiysk RUS;
for the first time (only on the ALA 1530) I have
logged Poti Georgia.
From 21:30 onwards, I inadvertently changed the
channel frequency navtex 490 Khz on Afedri SDR and consequently there
are no more ' decoding from that time forward.

11149. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-14 09:36:03 UTC
From: david
Topic: 9398 Message: 11149

Hello All,

As Dirk suggested, conditions are getting tougher, again. No sign of Navarea 19 this session, and many of the regulars were weaker or more broken.
Also, the mystery 'H' station did not show in the logs.

Logs over 1000km

Hi all,

Only logs from 518 kHz this time as my Perseus that was set on 490 kHz crashed.
I mean the original Perseus software crashed as did Studio 1 a few days ago.
Win 7 seems to have become less stable after 5 years.

73

Hello Roelof, Dirk and all,

Yesterday afternoon I ran some tests and
I installed another mini -whip in the garden with 5 meters of fishing
rod . I compared the relationship between signal and noise between the
mini -whip on the roof and one in the garden, in my case the noise floor
does not change and the signals ' are stronger on the mini -whip on the
roof . I tried to move the mini -whip in more areas of the garden and
found no major differences. In my case , the position on the roof seem
to be better. (In both cases , the braiding of the coaxial cable has
been connected to earth rods before entering the house).

Hello Maurizio,

I have been following this thread with interest.

Initially, I had my Mini-Whip mounted about 2 meters above my summer cabin's metal roof. It's performance was so bad that I thought the Mini-whip was damaged and sent it to Roelof for a check (in case the glued tubing/casing needed to be cracked open). The antenna was okay, and when I got it back, I mounted it on a 5 meter long wooden pole, around 10 meters from my cabin. Above that pole the Mini-Whip is the inside top of a 1.5 meter long PVC tube.

The difference from the first, above roof location was in my case enormous. The new location turned out to be perfect, so perfect that the Mini-Whip now outperforms a 20 meter long longwire 20 meter AGL.

In both cases the coax shield was/is grounded below the antenna location with a 2 meter long copper rod. At the new location and below the wodden pole, I punched down yet another 2 meter copper rod where the coax shield is grounded and coax is also routed back from there under ground to my cabin.

The old copper rod below the old location at the roof, are now only used as ground to my 2'nd receiver using the 20m longwire. So the Mini-whip is only grounded below it's wooden pole as grounding both ends are not recommended.

So, it would be interesting to know what materials are used in your roof, metal, stone or something else? My guess is that it is not metal.

Regards
Geir LA6LU

Hello Maurizio,

Interesting experiment, confirming that you live in a relatively
QRM-free house/enviroment, and your current system is optimal.

Regards - Dirk

Hello Dirk,

Thanks but I do not live here. It's a beautiful and peaceful place and is my summer cabin's QTH which am using quite much.

I am a quite active ndb listener too, so that's the main purpose for the Mini-Whip. Your findings matches my own experience with the Mini-Whip around. 6.5 meters above ground. I think you said your optimal finding was between 5 and 7 meters. Roelof also do not recommend mounting it in metal masts. Non-conducting masts are best, like wood or PVC. My own experience shows that probably goes for metal roofs as well ;)

I now have four antennas here, two for receive, the Mini-Whip and the 20m longwire, -and two for transmit. Both those are beacon antennas. I have two 24h-continous solar powered beacons here, one for the 630m band and one for the 10m band. The pic also shows (barely) a 30m band Inverted-V. After the pic was taken, It has ben taken down now and a new 5/8 wave vertical for the 10m band has been set up instead. For the 630m beacon, I have constructed an L-matched Marconi-X antenna which is a 14.5 meter glassfiber mast with four crossed and sloped top-hat wires. It's highest point is 16.5 meters above ground, but it's electrical length is almost 60 meters (because of it's crossed top-hat) and the antenna is resonant on 476.5 kHz. The L-match is located in the grey box right below at the antenna base. Below it, there are 12 long radials, all under ground consisting of around 230 meters of radial wire and five 2m copper rods.

Regards
Geir, LA6LU

Hello All,

I was intrigued by this entry in the log this morning. There seem to be no likely scheduled transmissions at that time of day to cover the areas mentioned, and it seems to be a routine weather forecast so it is most likely to be sent at the next scheduled broadcast.

Almost certainly of Portuguese-speaking origin. Did anyone get a clearer decode that identifies the sender?

11165. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-15 10:19:55 UTC
From: david
Topic: 9398 Message: 11165

Hello All,

Propagation conditions meant that it was tough going through the overnight logs. So I was elated to find, at the end of the 518kHz log, that YaND had snagged $04X Labrador.

```
2015-10-15 03:59:08> ZCZC XE26
2015-10-15 03:59:14> ~GREENLFN~~~L~V~SC~{}150105 UTC OKT 2015
2015-10-15 03:59:18> SYNOPSIS 21.00 UTC.
2015-10-15 03:59:31> A LOW, 987 HPA, OVER WESTERN BAFFIN BAY, IS MOVING
[SLOWLY] TOWARDS [NORTHEAST] D
2015-10-15 03:59:42> EEPENING. A LO~, 983 HPA, OVER LABRADOR SEA, IS MOVING
IN NORTHEASTERN DIRECT
2015-10-15 03:59:54> ION AND IS EXPECTED THURSDAY AFTERNOON OVER MEQQUITSOQ.
A LOW, 984 HPA, [NORTH]
2015-10-15 04:00:06> OF DANEBOR~, IS~MOVING [TOWARDS] EA~T FILLING
~OMEWHAT~M ~ HIGH,~1011 HPA~N OV
2015-10-15 04:00:16> ER CENTRAL GREENLAND, IS [MOVING] A LITTLE TOWARDS
EAST, AND WEAKENS.
2015-10-15 04:00:16>
2015-10-15 04:00:16>
2015-10-15 04:00:18> NNNN
```

But it didn't ring true, and a little digging showed that YaND had spotted the 'X' and 'Labrador' and had put 2 and 2 together to get an optimistic answer. Grindavik it has to be ;-(

Hi David

Definitely from 02P Porto Santo, Madeira I received a good copy here on my navtex computer that I will transfer across to this machine later and send it to you.

Subject: [navtexdx] Identity Parade

Hello All,

I was intrigued by this entry in the log this morning. There seem to be no likely scheduled transmissions at that time of day to cover the areas mentioned, and it seems to be a routine weather forecast so it is most likely to be sent at the next scheduled broadcast.

Almost certainly of Portuguese-speaking origin. Did anyone get a clearer decode that identifies the sender?

11171. RE: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-15 13:49:05 UTC
From: david
Topic: 9398 Message: 11171

Hi Robert and Roelof,

Thanks for the clearer decode, Roelof, and thanks to Robert for identifying
Porto Santo as my mystery sender.
My apologies for forgetting that the frequency only appears in the Report
page and not in the raw log. It was a 518kHz transmission.

Best Wishes,
David

Hello David,

This is what I found and yes, it is Grindavik.

Hi David,

I catched a load of similar garbage at that time:

```

Hello Roelof,

Well spotted!
It appears that the introductory part of Portuguese weather bulletins is quite similar, except for the CENCOMARXXXX part.
Also note the station specific RE// PE// and FB// lines.

Something learned again...

Regards - Dirk

From: Dirk Claessens
Topic: 9398 Message: 11175

Hello David,

My Yand came up with Grindavik, because I got better copy.
For 1X, Yand found 3 keywords, for 4X Labrador only one.
In your message, 1 for Grindavik was found, and 1 for Labrador.
Yand will literally roll the dice in that situation...

Regards - Dirk

Subject: [navtexdx] Identity Parade

Hello All,

I was intrigued by this entry in the log this morning. There seem to be no likely scheduled transmissions at that time of day to cover the areas mentioned, and it seems to be a routine weather forecast so it is most likely to be sent at the next scheduled broadcast.

Almost certainly of Portuguese-speaking origin. Did anyone get a clearer decode that identifies the sender?

Hi all,

A few not so common logs from last night on 518 kHz. I mean the long messages from Ismailia and Novorossiysk appearing twice.

Hello All,

The beginning of this message was masked by a transmission from Den Helder, so I missed the vital identifying character.
Although it seems quite garbled at first sight, careful use of the 'Reverser' function makes it fairly easily readable. I note the American spelling of 'DIARRHEA', but that is hardly conclusive. Can anyone tell me what the source was?

I received the transmission on 518KHZ

From: david
Topic: 9398 Message: 11183

Hello All,

490 kHz was full of NDB carriers, again. Weaker stations were corrupted, as a consequence and the log is quite short.
Northern stations were much in evidence, but the path to the West remains closed to me.

Logs over 1000km

From: david
Topic: 2783 Message: 11186

Hello Dirk,

Thank you. I remember seeing the message before, now you mention it. The copy I received this time was missing that vital last line, as well as the header.

By the way, we had talked about minor modifications to YaND in the past, and you gave the impression that some tweaks might be possible. The copy of this message that I received was a perfect example of something else I would ask about. I spent a lot of time copying some garbled text from the 'Log' screen, changing to the 'Report' screen, and pressing 'REV'. Then going back to the 'Log' screen for another line.
Would it be possible to find some space on the 'Log' screen for a copy of the Reverser? That is the screen I use it on most, and it is a very useful tool.

Yes, I know. Users are a nuisance ;-))

Best Wishes
David gm8xbz

Hello Vincent,

YaND flagged this message as NMR, which it is.
Propagation from that area peaked between 02:00 and 03:30 UTC.
See attachment.

73,
Roelof

11200. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-10-18 09:14:22 UTC
From: dl4ybp@...
Topic: 7241 Message: 11200

Hi all,

Some examples from what I could receive on Friday evening (2015 October 16).
At around midnight Studio 1 crashed again and logging ended.

After the power supply of my EK070 has been repaired I can use that rig agin.

73 and have a nice Sunday.
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95

Ismailia again.

11201. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-18 13:27:39 UTC
From: david
Topic: 9398 Message: 11201

Hello All,

Some 'old friends' reappeared in the log. It also good to see the decoding period extending.
Still no sign here of Poti on 490kHz. Also, the mystery 'H' station has been absent for a few days.

Logs over 1000km

Session Report for David Atkins, GM8XBZ

11202. Navtex log from Antwerp, BEL 20151018

Yahoo group: navtexdx (2015)
Date: 2015-10-18 14:43:06 UTC
From: Dirk Claessens
Topic: 11202 Message: 11202

Hi all,

Absolutely no sign of T/A here, but solid signals from the east; I could log an almost full transmission of Ismailia.
All received with the loop E/W, nothing from Bodo/Vardo, but Arkhangelsk made it.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : pa0rdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. wideband loop
Navtex-Decoder : YaND 6.4

```

Hello all,

Just another (minor) solar event happened around local noon
yesterday and the nice propagation of the night before has collapsed
completely!

Hello all,

Hi all,

Just a few not so common logs. Reception from the Turkish stations was quite good last night.

From: PalmerRD@...
Topic: 3028 Message: 11209

Foristell, Missouri
Receiver: ICOM R-75
Antenna: Clifton Z1501, base up 25 foot, 10 foot whip
Software: SEAtty 2.37

Finally a rather good night for reception from a lackluster season so far.
Nothing last night
from the west coast of the United States which is unusual. A poor copy of
$15H was
the highlight of the night. The latitudes and longitudes don't make
since, but still it seems to
place the locations in Chile.

Topic: 9398 Message: 11213

Hello All,

Nothing fancy.
I only get the first few lines from $20L Archangelsk, because nearer (powerful) transmitters cover the rest of the message. Indeed, if they are not very quick off their marks, I get nothing at all. Fortunately, Archangelsk identifies itself at the very beginning of a message.

Logs over 1000km

Hi all,

As YaND's log shows there was good propagation into the
Mediterranean, but also to the north.

11218. [INF] Malta Radio using 03T Kelibia time slot

Yahoo group: navtexdx (2015)
Date: 2015-10-20 19:34:39 UTC
From: Dirk Claessens
Topic: 11218 Message: 11218

Hi all,

I had read the following in the latest IHO Navarea III self-assessment report:

"The NAVTEX Station Kelibia has not been operational, since December 2012. Coastal
warnings from Tunisia are being transmitted by Malta NAVTEX Service and by SAFETYNET Service through the NAVAREA III Coordinator."
and:
"Tunisia sends navigational warnings of the coast of Tunisia to Malta by e-mail to be
broadcast by the Malta NAVTEX Station. Therefore, navigational warnings from Tunisia are
transmitted by NAVTEX through Malta and SAFETYNet through NAVAREA III Coordinator."

But it seems that Malta is now also using Kelibia's time slot to broadcast Tunisia-specific messages.
19:16 is definitely a T-slot. I had not noticed this before (but that could be just me)

Regards - Dirk

Hello Dirk,

Thank you for the information.
I did not notice it at all!

The first time I have received messages on behalf of Tunesia by
Malta in this timeslot was yesterday:

```

11221. Navtex log from Texel Island > 1500 km

Yahoo group: navtexdx (2015)
Date: 2015-10-21 08:03:16 UTC
From: visserdekorte@...
Topic: 10964 Message: 11221

Bad conditions towards the Pond not even Iceland....

David Visser

Holiday report from TEXEL Island N53.15 E4.86
Receiver: Perseus
Decoder: YAND 6.4
Antenne: Wellbrook ALA 1530 at 310/130 degrees
Distance: >1500 km

Hi all,

With a sad eye I see that conditions on 518 kHz were quite bad
last night. With a smiling eye, however, I see the 10m ham band
open. That means QSOs with 20 watts in PSK31 to the USA and Brazil.

73
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)

Hello all,

David, T/A propagation is poor at the moment.
I have only weak traces of Canadian NDB's and aural copy is not possible. Which is rare for me.

NDB DDP-391 from Puorto Rico was also very weak last night and this is a power house!

Hi all,

Quite stable reception from the eeastern Mediterranean.

73
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4 & TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)

From: roelof@...
Topic: 70 Message: 11239

Hello all,

T/A propagation is much improved!
I found a very scrambled decode of VCO, Sydney, CAN on 490 kHz.
Though compelete carbage, YaND flagged it by finding just three
letters!

On 518 kHz an early decode from VON, St. Johns, CAN was found and
NMR was back as well.

11240. Navtex log from Antwerp,BEL 20151023

Yahoo group: navtexdx (2015)
Date: 2015-10-23 13:15:47 UTC
From: Dirk Claessens
Topic: 11240 Message: 11240

Hi all,

What started as another dull night suddenly changed, as Sydney and
St.John's popped up in the log.
I noticed traces of San Juan as well around 03:05, too short to log though.

Regards - Dirk

11248. Navtex log from Antwerp, BEL 20151024

Yahoo group: navtexdx (2015)
Date: 2015-10-24 09:17:51 UTC
From: Dirk Claessens
Topic: 11248 Message: 11248

Hello all,

Nice conditions on both frequencies, a long time ago.
St. John's was logged early at 22:23, and Poti showed up again.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : pa0rdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. Wideband
loop
Navtex-Decoder : YaND 6.4

11249. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-24 11:30:32 UTC
From: david
Topic: 9398 Message: 11249

Hello All,

Propagation from the North opened up very early. Appalling local weather seems to have no effect on radio waves.
We change our local clocks this weekend, confirming that winter approaches.
Is this a good time to move the distance criterion further out, once more?

A lot of messages from the Azores and from Canarias, but only the one message from Canada. Poti remains missing from my log.

Logs over 1000km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Oct 24, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

From: dl4ybp@...
Topic: 7241 Message: 11253

Hi all,

What a Navtex night. Conditions were open to almost all directions.
And at the same time the 10m ham band has been open for the last
days as well, amazing. Reception on the mini whip was very similar.

73 and have a nice Sunday.
Hans, DL4YBP

QTH : Lübbecke, Northwest Germany

Sept-Iles, Canada. My first T/A on the QRG this autumn.

The time stamp is not correct,I guess, because this is a 10 year old
notebook running with Windows XP and is not connected to the Internet.

11254. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-10-25 10:35:57 UTC
From: roelof@...
Topic: 70 Message: 11254

Hello all,

I have been testing the internal noise of a home made LZ1AQ loop amplifier. It appeared that using an ALA1530 loop frame, the noise has a broad peak between 100 - 300 kHz. This limits the use for NDB chasing, however the effect is minimal for NAVTEX reception on 490 / 518 kHz.

Performance at LF can be considerable improved by using a loop with a larger diameter. To a certain degree, loop size is irrelevant and I am now testing a triangle loop with sides of 3.3 meter and the LZ1AQ amplifier at the middle of the base.

This loop is resonant at 28 MHz and a peak in received noise can be seen on a PERSEUS HF Span spectrum plot.

In ham circles this kind of loop is called a Delta Loop and is excellent for transmitting purposes. Used as such, it will give good reception over the HF bands, but it will deteriorate very much at MF / LF. Using it as an active loop, this is NOT the case and reception is very good down to 50 kHz.

It works very well at 28 MHz and I logged quite a few HAM beacons on it and also WSPR stations from Australia.

Last night, I have been testing this antenna on NAVTEX 490 and 518 kHz with the nulls north-south. The band noise is about the same as on my mini-whip.

There was no static and propagation from Sydney, CAN, as monitored with my mini-whip was very stable with hardly any fading. Propagation from Puerto Rico was poor.

I wonder if a similar broadband performance can be achieved with a Wellbrook ALA100. As the design is not unclosed. I can't build one and to buy one just out of curiosity seems a bit far fetched.

So if someone has an unused ALA100 lying around, maybe I can loan it for testing purposes.

NAVTEX 490 kHz over 1000 km, LZ1AQ active triangle loop:

11256. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-10-25 13:14:43 UTC
From: John Bruce McCreath
Topic: 70 Message: 11256

I'm using a delta loop for my main aerial on the 630M ham band and for Navtex reception with very good results. It's 111 feet (about 30 metres) on each side and the apex is up. The bottom is about 3 metres above ground and runs in a north-south alignment. I had to tip it about 45 degrees from being in a vertical plane due to upper support limitations. The tip is towards the east. It's resonated with about 450 pF. capacitance and is coupled to the RG-6 feed line via a toroid core transformer. I don't use a preamp, as it seems to work great without one, with T/A captures/decodes of ham and Navtex stations to prove just that.

73, Bruce, VE3EAR

Hello Bruce,

That is a large antenna and I don't think it needs a pre-amp!
Howe does it receive at VLF?

73,
Roelof Bakker

11258. Has mystery $00H station reappeared

Yahoo group: navtexdx (2015)
Date: 2015-10-25 15:06:08 UTC
From: david
Topic: 11258 Message: 11258

Hello All,

The reception of the mystery station with ID 'H' on 490kHz appeared to fade away. I found another decode overnight, but this time on 518kHz.

2015-10-25 01:10:13> ZCZC HB98
2015-10-25 01:10:16> FESGFDSGNNNN

The random characters are slightly different, but it still looks like a 'random Left Hand'. Did anyone else get this, or find a simple solution to the source?

I had a correspondence with the IMO about the transmissions on 490kHz. It took a while to explain why I was interested, but their best advice was that I should ask the ITU.
I explained that I knew as well as the ITU what the frequency was allocated for, and there was no concern about the frequency being compromised. I was simply trying to find out who the source was. The IMO answer was that they only "managed" the service, they didn't allocate users, and they didn't know. This seems a new twist on the meaning of 'manage', and flies in the face of the charter documents on their website. But, I was dealing with the Public Relations office and I wasn't going to get into a brawl over it. They _DID_ send me a copy of the IMO Master Plan, and that made interesting reading. If it isn't on the IMO website for download, and someone wants to read it, I can try to post a copy in the files area of this group. It is 6Mb, so might take some time.

11259. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-25 15:12:44 UTC
From: david
Topic: 9398 Message: 11259

Hello All,

More Northern signals. I don't often see Archangelsk, so I ought not complain, but transmissions from there were strong enough to cause garbled decodes from stations that are usually reliable.

Nice to see Horta and Sydney slugging it out, as well. Better times are coming, perhaps ;-)

From: Joachim Rabe
Topic: 11258 Message: 11260

Hi, David,

what's the date on the copy of the "IMO Master Plan" you received?

If it's from 2015 I'd very much appreciate if you could either upload it to the files area or send a copy via email.

Thanks very much in advance.

73s

Betreff: [navtexdx] Has mystery $00H station reappeared

Hello All,

The reception of the mystery station with ID 'H' on 490kHz appeared to fade away. I found another decode overnight, but this time on 518kHz.

2015-10-25 01:10:13> ZCZC HB98
2015-10-25 01:10:16> FESGFDSGNNNN

The random characters are slightly different, but it still looks like a 'random Left Hand'. Did anyone else get this, or find a simple solution to the source?

I had a correspondence with the IMO about the transmissions on 490kHz. It took a while to explain why I was interested, but their best advice was that I should ask the ITU.
I explained that I knew as well as the ITU what the frequency was allocated for, and there was no concern about the frequency being compromised. I was simply trying to find out who the source was. The IMO answer was that they only "managed" the service, they didn't allocate users, and they didn't know. This seems a new twist on the meaning of 'manage', and flies in the face of the charter documents on their website. But, I was dealing with the Public Relations office and I wasn't going to get into a brawl over it. They _DID_ send me a copy of the IMO Master Plan, and that made interesting reading. If it isn't on the IMO website for download, and someone wants to read it, I can try to post a copy in the files area of this group. It is 6Mb, so might take some time.

Best Wishes

> How does it receive at VLF?

Hi Roelof....I've not tried it down there, as the only receivers I've got which tune that low are SAQ RX and Spectran,
both being SDRs of a sort.

73, Bruce, VE3EAR

11265. RE: [navtexdx] Has mystery $00H station reappeared

Yahoo group: navtexdx (2015)
Date: 2015-10-25 18:29:12 UTC
From: david
Topic: 11258 Message: 11265

Hi Joachim,

The Plan is dated September 1st 2015.

I've uploaded it to the Group's Files Area. At the moment, it is in the root directory, [because I didn't know how to put it anywhere else]. I hope Dirk will be able to move it to where it should be.

It is a large pdf file. I hope it is useful, to you and to other members.

Best Wishes
DAVID

Subject: AW: [navtexdx] Has mystery $00H station reappeared

Hi, David,

what's the date on the copy of the "IMO Master Plan" you received?

If it's from 2015 I'd very much appreciate if you could either upload it to the files area or send a copy via email.

Thanks very much in advance.

11268. Navtex Log Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-10-26 07:28:09 UTC
From: dl4ybp@...
Topic: 11268 Message: 11268

Hi all,

Good conditions again. I got similar results with the mini whip.

73
Hans, DL4YBP

From: Dirk Claessens
Topic: 11258 Message: 11270

Ho David,

Thanks for the file.
I will leave it where it is, it's the only file there, no problem.

Regards - Dirk

Hello all,

Propagation has changed for the better.

I have again used the new loop and results are excellent.
My mini-whip was engaged otherwise, but the upcoming night I will
also run a third instance of YaND and Perseus / Linrad.
It will be interesting to find how these antennas compare for NAVTEX
reception.

So far, this is the first antenna I have tested that provides
excellent performance from 50 kHz up to 30 MHz.
Regarding susceptibility for local noise below 500 kHz, my mini-whip
is superior, though.

NAVTEX 490 kHz log over 1000 km, LZ1AQ loop antenna:

```

Hello Roelof, congratulations for your log;It gives me the desire to change hobby ...
With the loop uses a preamplifier?
Regards.
Carlo Alberto IW5CAO

Hello All,

Since most list-members seem to manage better decodes than I do, this is probably known to you already. But, for anyone who missed the messages, here is as good as I could get from Sydney on 490kHz. It seems the transmission times are changing. I can read the French, but not all of the signal detail was clear. It does seem, though, that Sydney has decided to transmit in its allocated time-slot. Perhaps someone who got a complete copy could summarise the changes.

Date: 2015-10-26 12:32:36 UTC
From: david
Topic: 9398 Message: 11274

Hello All,

The same message popped up on 518kHz, again

2015-10-26 01:10:14> ZCZC HB98
2015-10-26 01:10:16> FESGFDSGNNNN

Although the header is in the right slot for Irakleion, the signal quality is very different. There is also no sign of this format, or serial number, on the Greek Navtex internet pages where they list all their warnings.

Hi Roleof,
congratulation, nice Log !
I think your location is crucial for your listening.
I have a good location (Garda Lake Beach - no noise) but I do not have comparable results to your.
Regards,
Lio, IZ2BKO

Subject: [navtexdx] NAVTEX from Zealand, HOL

Hello all,

Propagation has changed for the better.

I have again used the new loop and results are excellent.
My mini-whip was engaged otherwise, but the upcoming night I will also run a third instance of YaND and Perseus / Linrad.
It will be interesting to find how these antennas compare for NAVTEX reception.

So far, this is the first antenna I have tested that provides excellent performance from 50 kHz up to 30 MHz.
Regarding susceptibility for local noise below 500 kHz, my mini-whip is superior, though.

NAVTEX 490 kHz log over 1000 km, LZ1AQ loop antenna:

```

Hello Lio,

Thank you for your kind words.

Yes, I am blessed with an excellent location for T/A reception.
My NDB log is even more impressive than NAVTEX!
And I am only using my mini-whip for chasing NDB's!

73,
Roelof, pa0rdt

11278. Re: [navtexdx] Canada Navtex 'News'

From: Dirk Claessens
Topic: 11273 Message: 11278

Hello David,

I catched a more complete copy lately - see below.
As you suspected, 04J Sydney has been using the wrong time slot all the time; the IHO has recently been urging all stations to adjust their schedules where applicable.
The original schedule 02:55/06:55/10:55/etc is for an R-slot - or, more correctly, halfway a R time slot :0)

The new schedule now becomes 01:30/05:30/09:30/etc.
This could mean good news though: where Sydney shared the R time slot with Limnos, the new slot is now shared with the (normally) far weaker 02J Horta.

Regards - Dirk

This Night San Juan in the log as a UNID, not for the first time. The keywords SAN JUAN and W INDIES are in the message. Is there an explanation why this became an UNID?

11283. Re: [navtexdx] San Juan

Yahoo group: navtexdx (2015)
Date: 2015-10-26 19:09:53 UTC
From: Dirk Claessens
Topic: 3393 Message: 11283

Hello Vincent,

The keyword San Juan (and others) are only used when the ZCZC R header
was also received.
Using it as a unique keyword could cause false IDs because other
stations(e.g. Miami) may use it in their weather reports.

Regards - Dirk

11284. Navtex log from Antwerp, BEL 20151026

Yahoo group: navtexdx (2015)
Date: 2015-10-26 19:35:24 UTC
From: Dirk Claessens
Topic: 11284 Message: 11284

Hi all,

I logged St'John's in the 22:20 time slot for 4 nights in a row now, but
no trace from Sydney & San Juan.
I guess propagation is shifting north of me later in the night.

Regards - Dirk

11288. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-27 10:25:59 UTC
From: david
Topic: 9398 Message: 11288

Hello All,

Propagation opened up again. 490 kHz reception was spoiled by a very strong carrier, only a few Hz away from the centre of the Navtex channel.

Logs over 1000km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Oct 27, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances
Report Sorted by Frequency and Time

11289. Roelof: Loop antenna tests

Yahoo group: navtexdx (2015)
Date: 2015-10-27 10:54:59 UTC
From: dl4ybp@...
Topic: 11289 Message: 11289

Hi Roelof, others,

I found an interesting website about an active loop called HDLA that is favoured by some German SWLs concentrating on mediumwave but also shortwave in general.
There are different versions of this antenna (different sizes of the loop).
The site is also in English. And there is a reference to a newsgroup dealing with this loop.
Perhaps you find this piece of information useful.

Hello Roelof

Are you still looking for a ALA100 ?
If so I have one that I would gladly give you as I no longer use it.

Regards Stephen

This loop is around for quite some time. It is kind of a evolution trough the years. You can find some interresting details on the site of Fernando:

Preview by Yahoo

The new NTi Megaloop ML200 seems to be very nice. I have the NTi MegaActiv MA-305 in use and it works very well and is used on my car as it is a broadband antenna so it also works well up to 160 mHz.

cheers,
Ron

Hello Stephen,

Thank you for your kind offer and I will be glad to accept it.
I only need the ALA100 to improve my knowledge.

Please ship it to my address:

Roelof Bakker
Esdoornlaan 11
4334 CC Middelburg
Netherlands

I am more than happy to pay for the shipping costs.

Best regards,
Roelof Bakker

```

My first St.-Johns reception of this season, but was not very active lately. I have revised my antennas and constructed a pole with the AAA-1a active loopkit double loops in a 90° offset in a vertical plane. In the top section @ 6m the MiniWhip is mounted inside the pole, protected from the weather elements. I also have erected a new 8.5 meter vertical with a 40:1 balun. Its performance tailers of under 900 khz due to the use of a type 43 ferrite core. This antenna is working very well on HF where it has a low noise floor and produces good S/N dynamic signals.

Antenna used: PA0RDT MiniWhip
Radio: Alinco DX-R8e
Qth: N51.099753 / E4.339573
Locator: jo21EC

11295. Navtex log from Antwerp,BEL 20151027

Yahoo group: navtexdx (2015)
Date: 2015-10-27 14:53:42 UTC
From: Dirk Claessens
Topic: 11295 Message: 11295

Hi all,

T/A propagation is shifting all over Europe it seems.
St' John's and Sydney have dissapeared from the logs, and now San Juan
could be logged at 23:30, which is very early for my QTH.
The UNID at 02:16 is probably 4N Portsmouth (Fenwick Isand ,
Chincoteague Inlet, "broadcast until cancelled" are hints)

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : pa0rdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. wideband loop
Navtex-Decoder : YaND 6.4

From: roelof@...
Topic: 11296 Message: 11296

Hello all,

I have been very busy otherwise today, but these decodes were found:

Triangle Loop antenna, LZ1AQ amplifier:

2015-10-26 22:25:58> NNNN

Except a couple of 1 second timing differences (hardly to blame
either antenna), I can't find any difference!

73,
Roelof

Hello all,

I found VCO Sydney CAN on 490 Khz, but I think is not
true, because the time slot is wrong:

Hello Maurizio,
The first 2 messages you received were definitely Sydney! (I have doubts about the 3rd one, could be a French station)
And the time was right as well, Sydney has recently changed its transmission schedule, in order to comply with the J-identifier.
01:30 is the correct J-slot. See their message below as received here.

Regards - Dirk

Hi Roelof,

Thanks for the test, very interesting indeed!

Regards - Dirk

11304. Re: [navtexdx] Loop versus mini-whip

Yahoo group: navtexdx (2015)
Date: 2015-10-27 23:51:21 UTC
From: Maurizio
Topic: 11296 Message: 11304

Hello Roelof, another great test !
Thank you.

ALA 100 is an antenna of my wishlist to be tested.
I think it could be a better alternative to the ALA 1530, even if your mini whip is always a point of reference for all of us.

Maurizio

Subject: [navtexdx] Loop versus mini-whip

Hello all,

I have been very busy otherwise today, but these decodes were found:

Triangle Loop antenna, LZ1AQ amplifier:

Hi all,

Please find a selection of what I received last night.
2x T/A so early is a surpise for me. And Grindavik rather late in the morning shows that were are in autumn, indeed.

73
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4 & TrueTTY 2.95 (to dig its raw log for fragments that hardly any decoder can decipher)

Hello Dirk,

Below is an excellent example of YaND's decision algorithm:

```
---
20151027 2239 518 $04Q VCO Sydney,CAN 4564
2015-10-27 22:39:57> ZCZC ~E7~
2015-10-27 22:40:25> ~~~~~+~{}NAVTEX/2 FOR SYDNEY VCO AT 8:00
~~~~~~{}LD 27/22Z-29~0~~~~~{}ZCZC QB
2015-10-27 22:40:25> 11
2015-10-27 22:40:30> MALIN HEAD COAST GUARD/ EJM
2015-10-27 22:40:36> GALE WARNING TUESDAY 27 OCTOBER 2158GMT 11
2015-10-27 22:40:36>
2015-10-27 22:40:40> S H A N N O N
2015-10-27 22:40:45> SOUTHERLY GALE FORCE 8 EXPECTED LATER
2015-10-27 22:40:45>

Topic: 11296 Message: 11309

Hello all,

Last night I have run both antennas the full time and results are interesting.

In theory both antennas should receive equally well. The only difference is that the loop has two nulls in the reception pattern. It should also be estimated that NAVTEX channels are suffering from co-channel interference for the largest part of many time slots.

An excellent example of this is reception of VON, St. Johns, CAN, 3980 km at 22:24 UTC yesterday. Apparently the channel was clear and VCO was received on both antennas with a perfect decode.

The mini-whip received just a few more stations as is to be expected as it has no nulls. Miami was received on the mini-whip and on the loop there was a much scrambled decode, which did not provide a solid clue. However, a slight adjustment of the direction of the loop might yield a different result.

What this testing is all about, is my interest active reception antennas. I have investigated the LZ1AQ design and it appears that for good performance at LF a large diameter loop is necessary. If the size of the loop is e.g. the same as a delta loop for 28 MHz, we have an excellent active broadband reception antenna that covers the range from 50 kHz to 30 MHz.

Andy Akin from Wellbrook has developed a new low noise loop amplifier, which comes at a stiff price. For commercial reasons his designs are not public and one has to guess what is inside. So far, my experience has been that once the size of the loop is sufficiently large, the noise floor of the loop amplifier is not much of an issue.

It is fun to do these tests and I will try some other loop amplifier designs in the near future. To be continued.

Hello Hans,

Thank you for the HDLA link.

There is some high level technical information about loop antennas.
However I can't find a circuit diagram.
Like many other designs the emphasis is on lab test performance.
Actual reception information, like a PERSEUS HF Span 0-40 MHz
spectrun plot is not available.

This is a gripe I have with many commercial offerings, which seem to
be rather about numbers than actual reception data.

There is a lot of myth floating around about loops, when in fact
there is no magic at all.

To pay over Euro 100 for testing purposes, seems a bit odd when I
probably can roll my own.

73,
Roelof

From: david
Topic: 9398 Message: 11314

Hello All,

Like Hans, I was struck by the extended propagation window. Distant stations are coming in earlier in the evening and later in the morning.

Dirk was right about $02J Horta and $04J Sydney. It was interesting to watch the two signals slugging it out in the 0530 slot. Although Horta is much closer to me, there was not a huge difference in signal strength/quality. Does anyone have details of the relative radiated powers of these stations? Perhaps Dirk was able to use his new measure of signal quality to give a better idea of the signal levels than my subjective estimates.

Logs over 1000km

11315. RE: [navtexdx] Roelof: Loop antenna tests

Yahoo group: navtexdx (2015)
Date: 2015-10-28 14:29:00 UTC
From: david
Topic: 11289 Message: 11315

Hi Hans, Roelof, interested readers,

I had some difficulty following up the HDLA link. The 'activeloop.de' website directed you to what appears to be the site of a 'silent key'. That site, in turn directed me to the website of HW Mohr, and I couldn't find any information about the HDLA there, either.

I share Roelof's dismay at the lack of information about designs. However, we have seen what happens when you publish details. Roelof's Miniwhip was available as a kit from an eBay seller in the USA, without any credit [or payment] to the designer. No wonder Wellbrook products are potted in resin. The Wellbrook amplifiers are good. Whether they are as good as the retail price suggests is a personal judgement we all have to make. But some numbers from ALL suppliers would be welcome. Of course, different locations give different results, and what works well for one of us can be a disaster for someone else.

I would like to ask a specific group of questions.
A few years ago, I purchased one of Chavdar's LZ1AQ amplifiers. Then I moved house and it got packed away. The box came to light recently, and I would like to finally put the loop into use. But the design was for a 1m loop. Does recent study suggest that a larger loop would be beneficial, especially to those of us who seem to suffer weak signals? Does this also apply to the Wellbrook ALA1530 design? Is overloading an issue?

Best Wishes,
David gm8xbz

Subject: Re: [navtexdx] Roelof: Loop antenna tests

Hello Hans,

Thank you for the HDLA link.

There is some high level technical information about loop antennas.
However I can't find a circuit diagram.
Like many other designs the emphasis is on lab test performance.
Actual reception information, like a PERSEUS HF Span 0-40 MHz
spectrun plot is not available.

This is a gripe I have with many commercial offerings, which seem to
be rather about numbers than actual reception data.

There is a lot of myth floating around about loops, when in fact there is no magic at all.

To pay over Euro 100 for testing purposes, seems a bit odd when I probably can roll my own.

73,
Roelof

11316. Navtex log from Antwerp,BEL 20151028

Hi all,

Report over 1500 km.
Nice conditions.
Anyone got more from the UNID at 0419?

Googling on "backup launch day" brought me straight to a very similar
Miami log from Bruce the other day:

```
2014-10-25 08:05:47> 2.HAZARD PERIODS FOR PRIMARY LAUNCH DAY AND F

From: Dirk Claessens
Topic: 11308 Message: 11317

Hi Roelof,

SYDNEY VCO did the trick.
It's not perfect, but coming close :0)

Regards - Dirk

11318. Re: [navtexdx] Re: NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-10-28 14:58:43 UTC
From: roelof@...
Topic: 70 Message: 11318

Hello Ron,

The wire length is 10 meter and arranged in the form of a triangle.
The top is at a height of 5 meter. The base is horizontal.

The antenne is directly connected to a balanced pre-amplifier; a
modified LZ1AQ design.

The orientation is 300 degrees, but for the upcoming night it will
be changed to 225 degres (SW).

73,
Roelof

11319. Re: [navtexdx] Navtex log from Antwerp,BEL 20151028

Yahoo group: navtexdx (2015)

From: Dirk Claessens
Topic: 11316 Message: 11319

I forgot the Odessa detail log.
Odessa is only very rarely received here.
Only the part in blue comes from Odessa, the rest is probably Vardo.

Regards - Dirk

11320. Navtex logs from Lodi with T/A - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-10-28 15:19:08 UTC
From: Maurizio
Topic: 11320 Message: 11320

Hello all,

this is the very very first time I have logged NMR San Juan,PTR at 23:16
with good decodes !
Then, VCO Sydney,CAN on 490 Khz at 01:30 with good decodes too !

It's interesting to note that T/A was logged only on mini-whip !

Ok, Roelof thats a simple delta loop in design. Cannot find this balanced préamp that you use on Chavdar's site. I do have finally finished the AAA-1a kit I got from him two years ago, but it is still without the common mode choke.

If you like I have a low noise ALA-100LN large aperture you can borrow for a test. Also have two FLG-100LN modules that are not in use for the moment as I want to make an array with them, but not before the summer.

Hello Roelof

Sent today by British Royal Mail. No need to pay the postage as I am pleased to help.

Also in the box is a surprise early Christmas present, another item I no longer use but you can put to good use.

Regards Stephen

David:

You may find info related to your question in a post in my personal file on the NDBList Yahoo site under the file name "LZ1AQ Antennae NDB DXing". Parts 2 & 3 give comparative measurements on 7 different LZ1AQ configured antennae of varying aperture versus the Wellbrook ALA 1530 Loop/preamp combination. Part 4 gives measurement data (gain & noise floor) on eleven LZ1AQ preamps that I have constructed. Part 1 which gave an overall summary, appeared as Group posting last month.

Subject: RE: [navtexdx] Roelof: Loop antenna tests

Hi Hans, Roelof, interested readers,

I had some difficulty following up the HDLA link. The 'activeloop.de' website directed you to what appears to be the site of a 'silent key'. That site, in turn directed me to the website of HW Mohr, and I couldn't find any information about the HDLA there, either.

I share Roelof's dismay at the lack of information about designs. However, we have seen what happens when you publish details. Roelof's Miniwhip was available as a kit from an eBay seller in the USA, without any credit [or payment] to the designer. No wonder Wellbrook products are potted in resin. The Wellbrook amplifiers are good. Whether they are as good as the retail price suggests is a personal judgement we all have to make. But some numbers from ALL suppliers would be welcome. Of course, different locations give different results, and what works well for one of us can be a disaster for someone else.

I would like to ask a specific group of questions.
A few years ago, I purchased one of Chavdar's LZ1AQ amplifiers. Then I moved house and it got packed away. The box came to light recently, and I would like to finally put the loop into use. But the design was for a 1m loop. Does recent study suggest that a larger loop would be beneficial, especially to those of us who seem to suffer weak signals? Does this also apply to the Wellbrook ALA1530 design? Is overloading an issue?

Best Wishes,
David gm8xbz

Subject: Re: [navtexdx] Roelof: Loop antenna tests

Hello Hans,

Thank you for the HDLA link.

There is some high level technical information about loop antennas.
However I can't find a circuit diagram.
Like many other designs the emphasis is on lab test performance.
Actual reception information, like a PERSEUS HF Span 0-40 MHz
spectrun plot is not available.

This is a gripe I have with many commercial offerings, which seem to
be rather about numbers than actual reception data.

There is a lot of myth floating around about loops, when in fact
there is no magic at all.

To pay over Euro 100 for testing purposes, seems a bit odd when I
probably can roll my own.

73,
Roelof

George,
Thank you for the references. I am going to have to read them carefully, as they contain a lot of data. A first glance suggests that the copper pipe I had intended to use might not be a good idea for Navtex and NDB frequencies.
Best Wishes
David gm8xbz

Hi David,
The rule of thumb is about 1 kW TX output power in daytime and 300 W at night.
No idea of actual ERP though.
This link gives info of the intended coverage of USCG stations: Coverage USCG <http://www.navcen.uscg.gov/?pageName=NAVTEX>
Click on the links for pictures.

> Perhaps Dirk was able to use his new measure of signal quality to give a
> better idea of the signal levels than my subjective estimates.

For Sydney (@ 4634km) on 490, I get figures of 6..10%, For Porto Santo (ex Horta, @2568km) on 518 20..25% ,
both on a scale of 0..100.
For 03R Limnos (@ 2050 km - in the same slot in the old schedule) 35..40%

Regards - Dirk

Hi, Roelof,

you won't find a circuit diagram for the HDLA anywhere since Horst and Dirk spend over two years developing it.

If you'd like to test it, I would be happy to borrow you my "HDLA 12" which I don't use for the time being.

You might also contact Henry W. Mohr for further details (<mailto:info@...> info@... / <http://www.hwmohr.de> http://www.hwmohr.de).

11330. Re: [navtexdx] Navtex logs from Lodi with T/A - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-10-28 20:30:39 UTC
From: roelof@...
Topic: 11320 Message: 11330

Hello Maurizio,

This is a direct email.

Congratulations with your first T/A catches.
Yes, a mini-whip can do a nice job.
I hear the world on it.

On an other note, lately your log formatting has changed to a larger font. This causes line wraps for each log entry:

```
----------------------------------------------------------------
20151027 1757 518 $01L LGQ Rogaland,NOR 1484 [Perseus SDR
+ ALA 1530]
20151027 1800 518 $01M Lxx Jeloya,NOR 1578 [Perseus SDR
+ ALA 1530]
20151027 1821 518 $03O 9HD Malta,MLT 1165 [Perseus SDR
+ ALA 1530]
20151027 1830 518 $03P 4XO Haifa,ISR 2610 [Perseus SDR
+ ALA 1530]
20151027 1955 518 $09X SUZ Ismailia,EGY 2567 [Perseus SDR
+ ALA 1530]
```

For uploading your log in REU, I have to remove manualy every line wrap. Can you use the smaller font in the next log?

If this is not possible, you can also mention the information at the end of the line (PERSEUS SDR + ALA1530) only once above the logs and not at the end of every line.

Thank you in advance.

73,
Roelof Bakker

Hi Roelof, Vincent,

This is a clear case of Yand being fooled into the ZCZC A + NORWEGIAN trap.
I guess this is a Rogaland message.

Regards - Dirk

11336. A weird loop antenna

Yahoo group: navtexdx (2015)
Date: 2015-10-29 03:21:17 UTC
From: John Bruce McCreath
Topic: 11336 Message: 11336

All the talk about loop antennas lately got me to thinking about how an omni-directinal receiving loop could be made. I modelled one from a short length of #14 copper wire just to check the concept and to see what it would look like. That was easily done, now to describe it....a challenge!

Picture a globe of the earth. Around the equator is a one turn loop, with its ends being on the zero meridian. Form a second loop by bending one end north and the other south and carry them around the poles and meet at the equator on the international date line. This is the feed point of the resulting two turn loop.

I wonder if this could be modelled with a program like EZNEC to see if indeed it would be omni-directioinal and what its feed point Z would be? I don't want to spend money on some half inch (13mm) copper pipe (have you priced any lately?) before knowing whether or not it would work.

73, Bruce, VE3EAR

From: roelof@...
Topic: 11289 Message: 11338

Hello David,

>>>
Does recent study suggest that a larger loop would be beneficial, especially to those of us who seem to suffer weak signals?
<<<

The noise generated by this type of amplifier depends on the inductive load at the input. An inductance of 2.5 uH, (read a 1m diameter loop) produces a broad noise peak from 100 - 350 kHz, rendering the antenna useless for weak signal work.
Using a larger inductance, equivalent to a loop with a perimeter of 10 m, the noise peaks moves down to 35 kHz and is much narrower.
This is the reason, I have increased loop size.

>>>
Does this also apply to the Wellbrook ALA1530 design? Is overloading an issue?
<<<

I have no idea, as I don't own a ALA1530 loop head amplifier.

Best regards,
Roelof Bakker

11340. NAVTEX from Zealand, HOL Murmansk!

Yahoo group: navtexdx (2015)
Date: 2015-10-29 11:03:24 UTC
From: roelof@...
Topic: 11340 Message: 11340

Hello all,

Last night, for the first time ever, I received three messages from Murmansk and yes, on the LZ1AQ triangle loop directing NE / SW.

At the same time Kerkya produced solid decodes on the mini-whip and this probably explains why Murmansk has never been logged before. However, I have also used the LZ1AQ / ALA1530 frame combination in the same direction with nill results for UHS.

Note that nothing was received on the loop from the Middle East, which shows that the null in that direction is quite effective.

On an other note, if someone might have the impression that I am trying to prove that my mini-whip design is superior to an active loop, this certainly is not the case. Both antenna types can provide excellent results. This is all about radio fun and not about pecuniary interests.

Note that from the three messages from Murmansk only one was flagged correctly by YaND, though all are clearly transmitted by UHS.

Loop:

Topic: 9427 Message: 11341

Hello Vincent,

When you look at the decodes, you will see that the header is not a proper decode. The keyword that YaND used for decision making is NORWEGIAN, which is not a unique keyword for Svalbard.
So YaND might be wrong.

Rogaland is transmitting in the 09:50 UTC timeslot, so it could be very well a scrambled message from that station.

```

From: david
Topic: 11342 Message: 11342

Hello All,

Propagation has been really kind to me lately, with many previously rare stations becoming a commonplace. But that presents its own problems. Last night, I saw several indisputable messages from VCO Sydney on both channels, in timeslots I expected. But I received the following message on 518kHz :-

```
2015-10-28 23:17:03> E SD~~~~M~~{}HGY~~~O~L~~{}Z Q FT~WVNP~
W~~~~Y~{}H~CY~GAGOZY~~~~~~{}
2015-10-28 23:17:06> INCRELSING TO~SOU

2015-10-28 23:17:50> 15 ~(,95` )-53 9=34,8 -,$ 59 25
2015-10-28 23:17:56> THURSDAY MORNING. W~ND INCREASING TO
2015-10-28 23:18:01> SOUTHEAST 40 NEAR NOON THURSDAY WITH
2015-10-28 23:18:08> GUSTS TO 60 FROM MARGAREE HARBOUR TO
2015-10-28 23:18:15> BAY ST. LAWRENCE~M WIND DIMINISHING TO
2015-10-28 23:18:20> SOUTH 30 THURSDAY EVENING. END
2015-10-28 23:18:21> NNNN
```

The header was masked by a transmission from Oostende. Yes, this message is Canadian, but the timeslot is allocated to Iqualuit(04T), and the geography is wrong. Poring over a chart, the message could be St Johns(04O) or Yarmouth(04U). Can anyone identify the sender for me?

Best Wishes
David GM8XBZ

Dear Roleof,

for no-directional NAVTEX NDB DX Your miniwhip is simply the best!
Also very good for non-directional 2,187.50 kHz GMDSS DX.

Thank'You for incredible job and no-business approach !

Lio, IZ2BKO

Subject: [navtexdx] NAVTEX from Zealand, HOL Murmansk!

Hello all,

Last night, for the first time ever, I received three messages from Murmansk and yes, on the LZ1AQ triangle loop directing NE / SW.

At the same time Kerkya produced solid decodes on the mini-whip and this probably explains why Murmansk has never been logged before.
However, I have also used the LZ1AQ / ALA1530 frame combination in the same direction with nill results for UHS.

Note that nothing was received on the loop from the Middle East, which shows that the null in that direction is quite effective.

On an other note, if someone might have the impression that I am trying to prove that my mini-whip design is superior to an active loop, this certainly is not the case. Both antenna types can provide excellent results. This is all about radio fun and not about pecuniary interests.

Note that from the three messages from Murmansk only one was flagged correctly by YaND, though all are clearly transmitted by UHS.

Loop:

Hi Roelof,

Do keep on experimenting. You have obviously got your receive chain optimised, and it is interesting to see how the changes, only in the antenna, affect reception. Although many of us have less favourable situations, any small improvements you can identify will help us too.

And it is about experiment and discovery, not just about lists of stations. With the help of members of the group, I have made huge improvements in my receiving set up over the past year. When I was struggling to decode stations in Spain, I could not have dreamt that I would be agonising over which Canadian station I had received less than a year later. All down to the information and guidance on the List.
Please keep us updated on your progress.

Best Wishes,
David gm8xbz

Subject: [navtexdx] NAVTEX from Zealand, HOL Murmansk!

Hello all,

Last night, for the first time ever, I received three messages from Murmansk and yes, on the LZ1AQ triangle loop directing NE / SW.

<snip>

On an other note, if someone might have the impression that I am trying to prove that my mini-whip design is superior to an active loop, this certainly is not the case. Both antenna types can provide excellent results. This is all about radio fun and not about pecuniary interests.

Hello Roelof,

Sorry for this inconvenience.

I made the necessary changes to avoid it happening again.

Maurizio

Date: 2015-10-29 12:31:28 UTC
From: John Bruce McCreath
Topic: 11336 Message: 11349

I forgot to mention that when installed, the two loops are in a vertical plane with the feed point down. That should result in it being omni-directional.

73, Bruce, VE3EAR

11350. Re: [navtexdx] A weird loop antenna

From: roelof@...
Topic: 11336 Message: 11350

Hello Bruce,

An excellent idea!
However, it might be more fun to visit each station worldwide in person! I guess a Sony ICF SW7600GR and a small laptop for YaND will do!

73,
Roelof

11351. Re: [navtexdx] NAVTEX from Zealand, HOL Murmansk!

Topic: 11340 Message: 11351

Hi Roelof,

Congratulations for that!
The nulls of the loop must be very deep and effective to supress Kerkyra.
I guess many wire loops will be built in the coming days and weeks :0)

Regards - Dirk

11352. NA-Log from Foristell, MO

Yahoo group: navtexdx (2015)
Date: 2015-10-29 13:55:20 UTC
From: PalmerRD@...
Topic: 3028 Message: 11352

Foristell, Missouri
A rather strange night last night, not a whole lot of different stations but a couple of
nice ones. The noise floor was quite high with a lot of static.

11353. Re: [navtexdx] NAVTEX from Zealand, HOL Murmansk!

Yahoo group: navtexdx (2015)
Date: 2015-10-29 14:17:39 UTC
From: roelof@...
Topic: 11340 Message: 11353

Hello Dirk,

Yes, this is an amazing result. None of the regulars from that area were logged, except La Madelena and Mondolfo.
I have been further looking into HF performance and when rotated for Murmansk, the signal to noise level on the 40M hamband is significantly better than on my doublet.

The noise at LF is far worse than on my mini-whip and it only starts to improve above 400 kHz, which is nice for NAVTEX!

It does not help against PLC though.

73,
Roelof

11354. Re: [navtexdx] Identity Crisis

Hi David,

I 'm pretty sure this is Sydney off-schedule (nothing seen here at that time)
Magdalen and Lawrence are keywords for Sydney.
See example below from my archives in 2014

11355. Navtex log from Antwerp, BEL 20151029

Yahoo group: navtexdx (2015)
Date: 2015-10-29 14:58:48 UTC
From: Dirk Claessens
Topic: 11355 Message: 11355

Hi all,

Decent conditions continuing.
Bodo/Vardo in 3 time slots, Ismailia in 2 slots.
Something was very wrong with the formatting of Irakleio.
carriage return/linefeed characters were not present it seems, Yand will
then enforce a linefeed after 80 characters.

73s - Dirk

Hi all,

Another interesting night on 518 kHz and nothing to report of 490 kHz.

73
Hans, DL4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4 & TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)

From: david
Topic: 11342 Message: 11357

Hi Dirk,

Thank you. It is a shame, because there were a lot of 'on-schedule' signals from Sydney. And I _STILL_ haven't managed to log Yarmouth ;-(

Canadian signals have been much better for me in the past couple of days. It just shows how localised the effects of propagation can be.

Best Wishes
David

Hi David,

I 'm pretty sure this is Sydney off-schedule (nothing seen here at that time)
Magdalen and Lawrence are keywords for Sydney.
See example below from my archives in 2014

From: david
Topic: 11336 Message: 11358

Hi Bruce,

I'm busy trying to visualise your loop. It reads like a description of a Martin Escher drawing ;-)

Wouldn't a plain horizontal loop serve the purpose? [Think 2m Halo on a larger scale].

Here in Scotland we are allowed to use 8mm pipe for heating systems. We can buy 50m coils of the stuff, and it is soft enough to easily form lengths of it into self-supporting loops. I'm not sure if your design would be as easy to support, though.
Let us know what transpires.

Best Wishes,
David GM8XBZ

Subject: [navtexdx] A weird loop antenna

All the talk about loop antennas lately got me to thinking about how an omni-directinal
receiving loop could be made. I modelled one from a short length of #14 copper wire
just to check the concept and to see what it would look like. That was easily done,
now to describe it....a challenge!

Picture a globe of the earth. Around the equator is a one turn loop, with its ends being
on the zero meridian. Form a second loop by bending one end north and the other
south and carry them around the poles and meet at the equator on the international
date line. This is the feed point of the resulting two turn loop.

I wonder if this could be modelled with a program like EZNEC to see if indeed it would
be omni-directioinal and what its feed point Z would be? I don't want to spend money
on some half inch (13mm) copper pipe (have you priced any lately?) before knowing
whether or not it would work.

73, Bruce, VE3EAR

Hello David....about ten years ago I tried a single turn horizontal loop on 160M. It was disappointing in its performance. It worked OK out to several hundred miles, but that was it. It had an NVIS pattern, which was great for local nets. I would think that with the longer wavelength at Navtex frequencies, it would be the same situation, or maybe worse.

Your 8 mm heating pipe sounds like just the ticket for making up a number of self supporting aerials. I was thinking of making mine about ten feet across and hanging it from a sky hook for support. It would be quite heavy, so I'll have to search for something lighter, like air conditioner refrigerant pipe.

73, Bruce, VE3EAR

Hello Dirk,

In YaND Upernarvik / Disco Island is labeled $04I and in REU /RNA/
RWW as $18I.

Which one is correct?

73,
Roelof

Hello Bruce,

I think horizontal loops is problematic because the magnetic fields are
vertical polarized and that's why you don't see horizontal loops normally.

Regards
Geir, LA6LU

David:

Re my recent pointer to my file on LZ1AQ antennae ...

Agreed ... without a guide, wading through the info in Parts 2 & 3 would be a fearsome task. The guide is contained in Part 1, which unfortunately for you, was posted much earlier on the NDBList home page - it was not included in the files posted on the 'Files Page". Since you might have difficulty recovering Part 1, a copy of same is included as an attachment to this e-mail.

May I suggest that in Part 1 the following (short) sections may be pertinent to your question: "Lz1AQ Noise Floor", "Loop Inductance", "More on Loop Inductance", and "Loop Inductance Too Large". In particular, note that for NDB Listening versus MW and HF listening, the restrictions on loop inductance for large aperture antennae are quite different.

73, George M (N2XM)

Hi Bruce,

I'm busy trying to visualise your loop. It reads like a description of a Martin Escher drawing ;-)

Wouldn't a plain horizontal loop serve the purpose? [Think 2m Halo on a larger scale].

Here in Scotland we are allowed to use 8mm pipe for heating systems. We can buy 50m coils of the stuff, and it is soft enough to easily form lengths of it into self-supporting loops. I'm not sure if your design would be as easy to support, though.
Let us know what transpires.

Best Wishes,
David GM8XBZ

Subject: [navtexdx] A weird loop antenna

All the talk about loop antennas lately got me to thinking about how an omni-directinal
receiving loop could be made. I modelled one from a short length of #14 copper wire
just to check the concept and to see what it would look like. That was easily done,
now to describe it....a challenge!

Picture a globe of the earth. Around the equator is a one turn loop, with its ends being
on the zero meridian. Form a second loop by bending one end north and the other
south and carry them around the poles and meet at the equator on the international
date line. This is the feed point of the resulting two turn loop.

I wonder if this could be modelled with a program like EZNEC to see if indeed it would
be omni-directioinal and what its feed point Z would be? I don't want to spend money
on some half inch (13mm) copper pipe (have you priced any lately?) before knowing
whether or not it would work.

73, Bruce, VE3EAR

Hi all,

As Dirk said some days ago: Very decent conditions.

73

Hi Roelof,

My Yand shows it as $18I, but I'm unsure if I have posted an update in the group, I'll check.
You may recall our interesting discussion some months ago with David about the confusing Upernavik naming and exact location?
According to the IHO all above 70 North is XVIII , Upernavik is at ~ 72N; Bill Hepburn also lists it in XVIII.

Hello Dirk,

Yes, I remember the discussion.
So $18I it is!

73,
Roelof

Hello all,

T/A propagation almost completely vanished and only a weak decode at local dawn of VCO was found. I am running an overnight recording every night and it appeared that the path to Sydney (checking reception of NDB QY-263, Sydney, CAN) features a fade out here in the 02:40 UTC time slot and nothing was found.

The path to Puerto Rico was also much weaker than earlier this week and nothing from NMR could be found.

From: david
Topic: 9398 Message: 11370

Hello All,

Of course, I look at other listeners' logs [usually with considerable envy], but it is really difficult to make comparisons. Hans - DL4YBP - for example logged many of the same stations this morning as I report here. But I am more than 1000km nearer to Canada than he is, and the path is almost totally over the sea. I should have a much easier task to hear it. Haifa, on the other hand, is more than 1000km further from me, and the signal has to fight its way over a big lump of Mainland Europe. Popping of Champagne corks when I log Haifa or any where else on the Eastern Mediterranean coast.

Logs over 1000km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Oct 30, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

Subject: Re: [navtexdx] A weird loop antenna [1 Attachment]

David:

Re my recent pointer to my file on LZ1AQ antennae ...

Agreed ... without a guide, wading through the info in Parts 2 & 3 would be a fearsome task. The guide is contained in Part 1, which unfortunately for you, was posted much earlier on the NDBList home page - it was not included in the files posted on the 'Files Page". Since you might have difficulty recovering Part 1, a copy of same is included as an attachment to this e-mail.

May I suggest that in Part 1 the following (short) sections may be pertinent to your question: "Lz1AQ Noise Floor", "Loop Inductance", "More on Loop Inductance", and "Loop Inductance Too Large". In particular, note that for NDB Listening versus MW and HF listening, the restrictions on loop inductance for large aperture antennae are quite different.

73, George M (N2XM)

11376. Reception and its Evaluation

Yahoo group: navtexdx (2015)
Date: 2015-10-31 08:23:08 UTC
From: dl4ybp@...
Topic: 11376 Message: 11376

Hi all,

I began my last log with 'As Dirk said ...' and meant decent reception at my QTH.
Dirk began hist last log with 'As Roelof said ...' and he meant mediocre reception.
Quite a funny coincidence. And both of us meant the same night. Then I compared Dirk's log with my and found that he could receive Las Palmas and Sao Miguel and here ... nothing.
Both stations are real goodies for me.
Oh yes, I would like to experience such mediocre conditions more often. ;-)

73s and have a nice day.

Hans, DL4YBP

11377. Navtex from Lübbecke
